MISCELLANEOUS: THE LACK OF A SPECIFIC HYDROPHOBIC SEGMENT IN THE PRECURSOR SEQUENCE SUGGESTS THAT IL-1 IS RELEASED BY DAMAGED CELLS OR IS SECRETED BY A MECHANISM DIFFERING FROM THAT USED FOR OTHER SECRETORY PROTEINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      . Immunol. 25:429-437(1988).

FUNCTION: PRODUCED BY ACTIVATED MACROPHAGES, IL-1 STIMULATES THYMOCYTE PROLIFERATION BY INDUCING IL-2 RELEASE, B-CELL MATURATION & PROLIFERATION, & FIBROBLAST GROWTH FACTOR ACTIVITY. IL-1 PROTEINS ARE INVOLVED IN THE INFLAMMATORY RESPONSE, BEING IDENTIFIED AS ENDOGENOUS PYROGENS, AND ARE REPORTED TO STIMULATE THE RELEASE OF PROSTAGLANDIN AND COLLAGENASE FROM SYNOVIAL CELLS.

A DNA fragment based on the cDNA clone was used to screen a human liver cDNA library leading to the isolation of a clone (T32402) coding for human mature IFN-gamma inducer protein (R99558), a useful therapeutic agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Example A-3-2;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DNA encoding to treat and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    platelet-increasing agent. It can be used for treating or preventing AIDS, condyloma acuminatum, renal or brain cancer, granuloma, mycosis fungoides, rheumatism and allergy. The protein can also be used to induce IFNgamma production in cultured cells. The IFNgamma inducer strongly induces cytotoxicity of killer T-cells and when used with interleukin-2 (II-2) and tumour necrosis factor (TNF), may improve the effect (or reduce side effects) of adoptive immunotherapy in tumours. This sequence can be used to produce the protein, which can then be purified (or assayed) using monoclonal antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Protein that induces gamma interferon prodo. in immuno:competent cells - used e.g. as antiviral or antitumour agent, also induces cytotoxicity of killer cells

                                                                                             used to treat leukopaenia and thrombocytopaenia associated with radiotherapy or chemotherapy of leukaemia and other cancers. When used in antitumour immunotherapy, this novel protein significantly improves the immunotherapeutic effect of interleukin-2 (II-2), compared with use of IL-2 alone, either when administered to the patient (before administration of IL-2) or by addition to the medium in which cells (intended for return to the patient) are being grown.
                                                                                                                                                                                                                        The present sequence encodes a novel protein from mouse liver cells, which induces interferon-gamma (IFN gamma) production in immunocompetent cells. This protein enhances cytotoxicity of killer cells and induces their formation. It is used as an antioncotic agent for antitumour immunotherapy, an antiviral (including anti-AIDS) or antibacterial agent,
                                                                                                                                                                                                                                                                                                                                  Human protein that induces interferon-gamma prodn. in immuno:competent cells - useful for adoptive immuno:therapy tumours and as antimicrobial agent etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           immunoregulatory; antitumour agent; chemotherapy; thrombocytopaenia; immunocompetent cell; asthma; rheumatism; interleukin; killer cell; ds.
